

Snowflake Data Engineer Learning Roadmap

Detail	Information
Version	1.0
Prepared By	Snowflake Team
Organization	GenufyTechWorks
Date	January 06, 2026

Table of Content:

S. No	Modules	Topic / Description	Page No
1.	Overview	Program Overview & Objectives	2
2.	Roadmap	Visual Roadmap Flow	3
3.	Program	Program Outline & Outcome	4
4.	Module 1	SQL Foundations (Week 1-2)	5
5.	Module 2	Data Warehousing Foundations	6
6.	Module 3	Snowflake Core Platform	7
7.	Module 4	Python for Data Engineering	9
8.	Module 5	Data Modelling	11
9	Module 6	AWS for Snowflake	12
10	Module 7	ETL &ELT Tools	13
11	Module 8	BI Tools & Analytics	14
12	Module 9	Git & GitHub	15
13	Hands-on Practice	Practical Exercises & Projects	16
14	Reference Material	Reference Links & Video Resources	17
15	Assessments	Bi-Weekly Tests	18
16	Test Resources	Test Links & Evaluation Material	18

1: Program Overview & Objectives

1.1 Program Overview:

Duration: 16 Weeks

This program is designed **to help freshers build strong, job-ready skills in Snowflake Data Engineering**. It provides a structured learning path covering SQL, data warehousing, Snowflake platform fundamentals, cloud integration, data modelling, automation, and analytics usage. The focus is on hands-on practice and real-world data engineering scenarios.

1.2 Program Objectives:

This program aims to equip freshers with the essential skills required to work as a **Snowflake Data Engineer** in real-world projects. The objective is to build a strong foundation in data engineering concepts and enable learners to design, develop, and support scalable data solutions on Snowflake.

By completing this program, learners will:

- Gain practical expertise in **SQL-based data analysis and transformation**
- Understand how **data is structured, modelled, and stored** in a data warehouse
- Learn to work with the **Snowflake cloud data platform** for ingestion, security, and performance.
- Develop the ability to **design analytics-ready data models**
- Use **Python and cloud services** to automate data workflows
- Build reliable data pipelines with **ETL / ELT tools**
- Ensure data accuracy through **data validation and quality checks**
- Support business reporting by preparing data for **BI and analytics tools**
- Follow **industry best practices** for collaboration and deployment using Git

2. Visual Roadmap Flow:

- **Snowflake is SQL-driven**; all data querying, transformation, and analysis depend on strong SQL.
- **Snowflake** is the central cloud data warehouse where data is stored, processed, secured, and scaled.
- **Data warehousing** concepts help design scalable, business-ready data models inside Snowflake.
- **Python** is used to automate Snowflake pipelines, data loads, validations, and orchestration.
- **Proper data modeling** ensures Snowflake data is fast, accurate, and BI-friendly for analytics.
- **AWS** provides the data landing zone (S3) and security layer that integrates directly with Snowflake.
- **ETL/ELT** tools orchestrate and manage large-scale data movement and transformations into Snowflake.
- **Data testing** ensures data accuracy, completeness, and trust before business consumption.
- **BI** tools consume Snowflake data to create dashboards and enable business decision making.
- **Git** enables version control, collaboration, and safe deployment of Snowflake SQL and pipelines.

3. Program Outline

Module	Topic	Duration
1	SQL Foundations	2 Weeks
2	Data Warehousing Foundations	2 Weeks
3	Snowflake Core Platform	3 Weeks
4	Python for Data Engineering	2 Weeks
5	AWS for Snowflake	1 Weeks
6	ETL / ELT Tools	2 Weeks
7	Data Testing & Quality	1 Weeks
8	BI Tools & Analytics	1 Weeks
9	Git & DevOps Basics	1Weeks
	Total Duration	15 Weeks

Program Outcomes:

By the end of this program, participants will be able to:

1. **Design scalable data warehouse architectures** using Snowflake and modern data modelling techniques.
2. **Build automated end-to-end data pipelines** using Snow pipe, Streams, Tasks, and ETL/ELT tools.
3. **Develop and optimize SQL and Python-based transformations** for real-world data engineering use cases.
4. **Implement data quality, testing, and validation frameworks** to ensure reliable and accurate data pipelines.
5. **Deploy, monitor, and manage cloud-based data solutions** using AWS services, Git, and DevOps best practices.

4. Module 1: SQL Foundations (Week 1-2)

Duration: 1st & 2nd weeks

Objectives:

Understand tables, keys, data types, and constraints. Write queries using SELECT, JOIN, GROUP BY, HAVING, and subqueries. Solve data problems with basic query optimization.

Resources:

SQL Bootcamp by Jose Portilla (Udemy) – structured course. Leet Code SQL 50 / Hacker Rank – query practice. W3Schools SQL – quick reference.

Days	Topics	Key Activities	Time
Day 1-2	SQL Basics - SELECT, INSERT, UPDATE, DELETE, WHERE, Operators	Install database, create tables, write basic CRUD queries	4-5 hours
Day 3-4	Filtering & Sorting - ORDER BY, LIMIT, DISTINCT, LIKE, IN, BETWEEN, NULL handling	Filter records, sort results, pattern matching practice	3-4 hours
Day 5-6	Joins - INNER JOIN, LEFT JOIN, RIGHT JOIN, FULL JOIN, CROSS JOIN, Self Join	Combine multiple tables, practice all join types with examples	5-6
Day 7-8	Aggregate Functions & Grouping - COUNT, SUM, AVG, MIN, MAX, GROUP BY, HAVING	Create summary reports, group data, filter grouped results	4-5 hours
Day 9-10	Subqueries & Set Operations - Subqueries, Nested queries, UNION, INTERSECT, EXCEPT	Write complex nested queries, combine result sets	5-6 hours
Day 11-12	Advanced Queries - CTEs, CASE, Views, Window Functions (ROW_NUMBER, RANK, DENSE_RANK, LAG, LEAD)	Create reusable queries, ranking, running totals	6-7 hours

Days	Topics	Key Activities	Time
Day 13-14	Database Design & Management - CREATE, ALTER, DROP, Constraints, Keys, Indexes, Normalization (1NF, 2NF, 3NF)	Design schemas, optimize tables, implement constraints	5-6 hours
Day 15	Transactions & Procedures - Transactions, COMMIT, ROLLBACK, Stored Procedures, Triggers, Error Handling	Handle transactions, automate tasks, build mini project	4-5 hours

Capstone Project:

Design a relational database using SQL for a sales domain. Write complex queries using JOINS, subqueries, and window functions to generate business KPIs. Submit SQL scripts and query outputs.

Module 2: Data Warehousing Foundations

Duration: 3rd week to 4th Week

Objectives:

Understand DW fundamentals, OLTP vs OLAP, 3-tier architecture, Inmon vs Kimball approach, Star/Snowflake Schema, ETL process, SCD Types, Data Marts, and OLAP operations.

Resources:

Data Warehouse Toolkit by Kimball – standard book. Edureka DWH Tutorial – videos. Kimball Design Tips – articles, Kimball Group articles, Star Schema & SCD blogs.

The Data Warehouse Toolkit – Ralph Kimball (Dimensional modelling bible)

Building the Data Warehouse – Bill Inmon (Enterprise DW concepts)

Kimball Group official articles (Facts, Dimensions, SCDs)

Snowflake Official Documentation & Snowflake Quickstarts

Days	Topic	Key Activities	Time
Day 1-2	DW Fundamentals	Learn what is Data Warehouse, Understand OLTP vs OLAP differences, Study 4 characteristics (Subject-oriented, Integrated, Non-volatile, Time-variant), Explore DW benefits and use cases	2-3 hrs/day
Day 3-4	DW Architecture	Study 3-tier architecture (Source → Staging → DW → Data Mart), Compare Inmon (Top-down) vs Kimball (Bottom-up) approach, Draw data flow diagrams	2-3 hrs/day
Day 5-6	Dimensional Modelling	Learn Star Schema and Snowflake Schema, Understand Fact Tables (measures) vs Dimension Tables (attributes), Practice designing schema for retail example	3-4 hrs/day
Day 7-8	ETL Process	Study Extract-Transform-Load phases, Learn data cleaning and transformation rules, Understand full load vs incremental load, Explore staging area concepts	2-3 hrs/day
Day 9-10	Slowly Changing Dimensions	Learn SCD Type-0 (retain), Type-1 (overwrite), Type-2 (history), Type-3 (column), Practice identifying correct SCD type for scenarios	2-3 hrs/day
Day 11-12	Data Marts & OLAP	Understand dependent vs independent Data Marts, Learn OLAP operations (Slice, Dice, Drill-down, Drill-up, Pivot), Review all concepts	2-3 hrs/day

Capstone Project:

Design a star schema data warehouse for retail analytics. Implement fact and dimension tables, including SCD Type-2. Populate data and validate KPIs using SQL. Submit schema design and SQL scripts.

6. Module 3: Snowflake Core Platform

Duration: 5th week to 7th week

objectives:

Understand Snowflake's architecture, core features, and performance optimization concepts, Gain hands-on experience with data loading, advanced SQL, security, and data protection mechanisms. Snowflake official documentation, SQL

References:

reference, and architecture guides.

Snowflake hands-on labs and free trial account for practical learning.

Community tutorials, sample datasets, and best-practice articles

Days	Topics	Key Activities	Time
Day 1-2	Snowflake Fundamentals & Architecture - Cloud data warehouse concepts, Snowflake vs Traditional DW, Multi-cluster shared data architecture, Virtual warehouses, Storage & Compute separation	Understand "why" Snowflake exists, create free trial account, explore UI, understand architecture layers	4-5 hours
Day 3-4	Database Objects & Setup - Databases, Schemas, Tables, Views, Stages, File Formats, Data types, DDL commands	Create databases and schemas, design table structures, understand object hierarchy	4-5 hours
Day 5-7	Data Loading & Unloading - COPY INTO, PUT, GET, Internal/External Stages, Bulk loading, Snow pipe, Continuous data loading	Load CSV/JSON/Parquet files, automate ingestion with Snow pipe, understand "why" stages exist	6-7 hours
Day 8-10	Querying & Performance - SELECT optimization, Caching (Result/Metadata/Warehouse), Clustering keys, Micro-partitions, Query profiling, Pruning	Write optimized queries, analyze query plans, understand "why" micro-partitions improve performance	6-7 hours

Day 11-14	Advanced SQL in Snowflake - Window functions, CTEs, Recursive queries, FLATTEN, LATERAL, Semi-structured data (JSON, AVRO, Parquet), VARIANT data type	Query nested JSON, flatten arrays, handle semi-structured data, practice complex queries	7-8 hours
Day 15-17	Time Travel & Data Protection - Time Travel (0-90 days), UNDROP, Fail-safe, Zero-copy Cloning, Data retention, AT/BETWEEN clauses	Recover deleted data, clone tables/databases, understand "why" Time Travel is powerful	5-6 hours
Day 18-21	Security & Access Control - RBAC, Users, Roles, Privileges, Row-level security, Column-level security, Data masking, Secure views, Network policies	Create roles and users, implement access controls, mask sensitive data.	7-8 hours
Day 22-24	Data Sharing & Marketplace - Secure Data Sharing, Reader accounts, Snowflake Marketplace, Data Exchange, Cross-region/Cross-cloud sharing	Share data across accounts, explore marketplace datasets, understand "why" data sharing is zero-copy	5-6 hours
Day 25-27	Automation & Integration - Tasks, Streams, Stored Procedures (JavaScript/SQL), UDFs, External Functions, Snow SQL CLI, Connectors (Python, Spark, Kafka)	Automate ETL pipelines, capture CDC with Streams, create procedures, connect Python to Snowflake	7-8 hours
Day 28	Snow Pro Certification Prep & Capstone Project – Snow Pro Core exam topics, Resource monitors, Cost management Best Practices End-to-end project	Build complete data pipeline project, solve practice exams, review all concepts, optimize costs	6-7 hours

Capstone Project:

Build a cloud data warehouse in Snowflake. Load data using internal stages and COPY command. Implement Time Travel, Streams, and Tasks for incremental processing. Submit Snowflake SQL scripts and screenshots.

7. Module 4: Python for Data Engineering

Duration: 8th week to 10th week

Objectives:

Build strong Python fundamentals required for data engineering and automation tasks. Develop the ability to write clean, reusable, and efficient code using core Python concepts. Apply Python for file handling, error management, and basic logging in real-world data workflows.

Day	Topics	Key Activities	Time
Day 1-2	Python Basics & Setup	• Install Python & IDE • Learn print () & input () • Understand variables & data types • Practice type casting & operators	4-5 hrs
Day 3-4	Operators & Conditional Statements	• Practice all operators • Write if-elif else programs • Use ternary operator • Build mini calculator	5-6 hrs
Day 5-6	Loops & Iterations	• Practice for & while loops • Use break, continue, pass • Create nested loops & patterns • Solve loop exercises	5-6 hrs
Day 7-8	Strings & String Methods	• Practice indexing & slicing • Use string methods • Format with f-strings • Solve string problems	4-5 hrs
Day 11-12	Dictionaries & Functions	• Dictionary CRUD operations • functions & parameters • Write lambda functions • Apply map (), filter (), reduce ()	6-8 hrs
Day 13-14	File Handling & Exception Handling	• Read/write text, CSV, JSON files • Use try-except-finally blocks • Handle multiple exceptions • Implement logging	5-6 hrs

8. Module 5: Data Modelling

Duration: 11th week

Objectives:

Build strong Python fundamentals required for data engineering and automation tasks.
Learn to write clean, reusable code using functions, data structures, and control flow.
Handle files, exceptions, and basic logging for real-world data processing scenarios.

Resources:

Official Python documentation and beginner-friendly tutorials.

“100 Days of Python” by Angela Yu for structured learning.

Hands-on coding practice using real-world exercises and sample datasets.

Day	Topics	Key Activities	Time(hrs)
Day 1	Dimensional Modelling Basics	• Understand Star & Snowflake Schema • Learn Fact vs Dimension concepts • Study grain & granularity • Explore real-world examples	4-5
Day 2	Dimension Table Design	• Create dimension tables • Apply SCD Types (SCD0, SCD1, SCD2, SCD3) • Design Conformed & Role-playing dimensions • Practice Junk & Degenerate dimensions	5-6
Day 3	Fact Table Design	• Create Transactional Fact tables • Design Snapshot & Accumulating facts • Define measures & additive types • Build complete Star Schema project	5-6
Project	E-commerce Data Model	• Design Customer, Product, Date dimensions • Create Sales Fact table • Implement SCD2 for Customer • Document complete data model	4-5

9. Module 6: AWS for Snowflake

Duration: 12th week

Objectives

Understand core AWS concepts with a focus on identity, access management, and cloud security fundamentals. Gain hands-on experience with Amazon S3 for storage, security configuration, and access control. Prepare cloud foundations required for integrating AWS services with Snowflake data pipelines.

Resources

AWS Official Documentation and Free Tier Tutorials, AWS IAM and Amazon S3 service guides. Hands-on labs and practice exercises using real AWS account

Day	Topics	Key Activities	Time
Day 1	AWS Basics & IAM Introduction	• Create AWS Free Tier account • Learn IAM concepts • Create users & groups	4-5 hrs
Day 2	IAM Policies & Security	• Write custom JSON policies • Apply least privilege principle • Enable MFA	5-6 hrs
Day 3	S3 Basics & Bucket Operations	• Create & configure S3 buckets • Upload/download objects • Set bucket properties	4-5 hrs
Day 4	S3 Security & Access Control	• Configure bucket policies & ACLs • Enable S3 encryption • Create pre-signed URLs	5-6 hrs
Day 5	S3 Advanced Features	• Setup versioning & lifecycle rules • Configure replication • Practice storage classes	5-6 hrs
Project	Practical Implementation	• Create IAM roles for S3 access • Build S3 static website • Document complete setup	4-5 hrs

10. Module 7: ETL / ELT Tools

Objectives

Understand modern ETL and ELT concepts and how they fit into cloud-based data engineering architectures.

References

Informatica PowerCenter official documentation and tutorials. dbt official documentation, best practices, sample projects. Apache Airflow documentation and community guides.

Days	Topics	Key Activities	Time (hrs)
1	ETL/ELT Fundamentals	• Understand ETL vs ELT concepts • Learn data pipeline architecture • Compare tool features	3-4
2	Informatica Basics	• Install & setup PowerCenter • Understand Source, Target, Mappings • Create basic workflows	5-6
3	Informatica Transformations	• Practice common transformations • Use Joiner, Filter, Router • Build end-to-end ETL pipeline	5-6
4	DBT Setup & Basics	Install dbt-core & configure profiles Understand dbt project structure Create first dbt model	4-5
5	DBT Advanced	• Write incremental models • Use Jinja & macros • Implement tests & documentation	5-6
6	Airflow Basics	• Install Airflow locally • Understand DAGs & Operators • Create first DAG	5-6
7	Airflow Advanced	• Use sensors & hooks • Schedule & monitor DAGs • Handle task dependencies	5-6
8-10	Integration Project	• Build complete pipeline • Deploy & monitor • Connect Airflow + DBT	8-10

11.Module 8: BI Tools & Analytics

Duration: 14th week

Objectives

Understand the fundamentals of business intelligence and how BI tools are used for data analysis and reporting. Gain hands-on experience in building interactive reports and dashboards using Power BI or Tableau. Learn to transform data, create visualizations, apply filters, and share insights with stakeholders

References

Power BI or Tableau official documentation and beginner tutorials, Microsoft Learn (Power BI) or Tableau Learning resources, Sample datasets for dashboard and visualization practice.

Days	Topic	Key Activities	Time(hrs)
1-2	Introduction & Setup	What is BI. Install tool (Power BI / Tableau). Explore interface. Create blank report.	2
3-4	Data Connection	Connect Excel/CSV files. Preview data. Import vs Live Query concept.	2
5-6	Data Transformation	Rename columns. Change data types. Remove duplicates. Filter rows. Handle nulls.	2
7-8	Basic Visualizations	Create Bar, Line, Pie charts. Add Table & Card. Format titles, colors, labels.	2
9-10	Filters & Slicers	Add visual/page filters. Use slicers (dropdown, buttons). Cross-filtering concept.	2
11-12	Dashboards & Sharing	Combine visuals into dashboard. Add titles & images. Export/Publish report.	2

Capstone Project:

Create an interactive Power BI dashboard using SQL/Snowflake as a data source. Implement DAX measures, slicers, and drill-through. Publish the report and submit Power BI Service URL.

12. Module 9: Git & Github

Duration:15th week

Objectives

Understand the fundamentals of version control and the role of Git and GitHub in collaborative development Gain hands-on experience with core Git commands, branching, merging, and pull request workflows, Learn best practices for code management, documentation, and team collaboration.

References

Git official documentation and beginner guides, GitHub Docs and GitHub Learning resources, Hands-on practice using sample repositories and collaborative exercises.

Days	Topic	Key Activities	Time(hrs)
1-2	Introduction & Setup	What is Git vs GitHub. Create GitHub account. Install Git. Configure username & email (git config).	2
3-4	Basic Git Commands	Learn git init, git add, git commit, git status, git log. Practice in local folder.	2
5-6	Repository (Repo) Basics	Create repo on GitHub. Clone repo (git clone) Connect local to remote (git remote). Push code (git push).	2
7-8	Branching & Merging	Create branch (git branch). Switch branch (git checkout). Merge branch (git merge) Resolve simple conflicts.	2
9-10	Pull Requests & Collaboration	Pull latest code (git pull). Create Pull Request (PR) on GitHub. Review & merge PR. Fork a repo concept.	2
11-12	GitHub Features & Best Practices	Create README.md file, Use Issues for tracking, Explore GitHub Pages (basic), Write good commit messages, Git ignore file usage.	2

13. Hands-on Practice:

Project: E-Commerce Sales Data Warehouse

What To Do:

AWS S3:

1. Create S3 bucket with name ecommerce-dw-project
2. Create folder structure: raw/orders/, raw/customers/, raw/products/, processed/
3. Upload sample CSV files (orders, customers, products data)

Snowflake:

4. Create database named e commerce_dw
5. Design Star Schema with:
 - dim_customer (customer details)
 - dim_product (product details)
 - dim_date (date dimension)
 - fact_sales (sales transactions)
6. Create S3 external stage
7. Use COPY command to load data from S3

SQL Analytics:

8. Write monthly sales report query
9. Find top 10 customers by revenue
10. Write category-wise product performance report
11. Calculate year-over-year growth
12. Perform customer segmentation analysis
13. Enable versioning on S3 bucket
14. Create lifecycle policy to move old files to Glacier after 90 days
15. Set up bucket policy for read-only access
16. Create separate folders for different file formats: raw/csv/, raw/json/, raw/parquet/
17. Upload files using AWS CLI commands

14. Reference Links & Videos

Topic	Resource Name	Type	Link/Notes/video
SQL Foundations	The Complete SQL Bootcamp by Jose Portilla	Course/Notes/video	udemy.com/course/the-complete-sql-bootcamp w3 school notes in SQL SQL complete Beginner to Advance

15. Bi-Weekly Mock Tests (SQL & Cloud/Data Warehousing Focus)

Bi-Weekly Schedule:

- Duration: 1-hour online quiz
- Format: 20 MCQs + 2 scenario-based / coding questions
- And Practice SQL Questions Daily
- Timing: End of every even week

16. Module-wise Test & Practice Links

Module 1: SQL Foundations

Hacker Rank – SQL Domain (DDL, DML, Joins, Aggregations)

<https://www.hackerrank.com/domains/sql>

Leet Code – SQL Practice Problems

<https://leetcode.com/problemset/database/>

Module 2: Data Warehousing Foundations

Khan Academy – Linear Algebra & Probability (Foundational Concepts)

<https://www.khanacademy.org/math/linear-algebra>

365 Data Science – Data Warehousing & Analytics Practice Tests

<https://365datascience.com/resources-center/practice-exams/>

Module 3: Snowflake Core Platform

Snowflake Hands-on Labs (Querying, Performance, Security)

<https://quickstarts.snowflake.com/>

Snowflake Community Tutorials & Exercises

<https://community.snowflake.com/>

Module 4: Python for Data Engineering

Leet Code – Python Track (DSA & Logic Building)

<https://leetcode.com/explore/>

Hacker Rank – Python Practice

<https://www.hackerrank.com/domains/python>

Module 5: AWS for Snowflake

AWS Skill Builder – IAM & S3 Quizzes

<https://skillbuilder.aws/>

AWS Free Tier Hands-on Labs

<https://aws.amazon.com/free/>

Module 6: ETL / ELT Tools

dbt Learn – Knowledge Checks & Labs

<https://docs.getdbt.com/learn>

Apache Airflow Documentation & Examples

<https://airflow.apache.org/docs/>

Module 7: Data Testing & Quality

dbt Tests & Data Quality Concepts

<https://docs.getdbt.com/docs/build/tests>

Great Expectations – Data Validation Tutorials

<https://greatexpectations.io/docs/>

Module 8: BI Tools & Analytics

Microsoft Learn – Power BI Practice & Assessments

<https://learn.microsoft.com/power-bi>

Tableau Training & Practice Questions

<https://www.tableau.com/learn/training>

Module 9: Git & DevOps Basics

GitHub Learning Lab

<https://lab.github.com/>

Git Official Documentation – Practice Guide

<https://git-scm.com/docs>

19. Certification & Career Mapping (Snowflake Focused):

Recommended Snowflake Certifications

This program is aligned primarily with Snowflake official certifications. Learners are strongly encouraged to attempt the following certification after completing the roadmap.

1. Snowflake Snow Pro Core Certification (Mandatory / Primary)

Certification Name:

Snowflake Snow Pro Core

Why this certification:

- Validates core Snowflake knowledge required for real-world data engineering roles
- Covers architecture, SQL, data loading, performance, security, and cost management
- Industry-recognized and widely requested by employers

Alignment with Program Modules:

- SQL Foundations, Data Warehousing Foundations
- Snowflake Core Platform
- Security & Access Control
- Performance Optimization
- Data Loading & Automation

Target Roles:

Junior Snowflake Data Engineer, Snowflake Developer, Cloud Data Engineer (Snowflake)

Optional Advanced Snowflake Certifications (Post-Program)

These can be pursued after gaining project or job experience.

2. Snowflake Snow Pro Advanced – Data Engineer

- Focuses on advanced data pipelines, optimization, security, and scalability
- Recommended after 6–12 months of Snowflake hands-on experience

3. Snowflake Snow Pro Advanced – Architect

Suitable for senior-level roles
