

4.Snowflake CSV Data Load - Questions

Why do we create a database (nest_data) in Snowflake before loading data?

What is the purpose of creating a schema (csv_schema) inside a database?

Why is a table (csv_table) created before loading a CSV file, and how does its structure relate to the CSV file?

What is an internal stage in Snowflake, and why do we create a stage (stage_csv)?

What is the purpose of the PUT command, and what happens when we upload a local CSV file to a Snowflake stage?

Why do we create a file format (csv_flatfile) in Snowflake?

What is the role of TYPE = CSV and SKIP_HEADER = 1?

What does the COPY INTO command do in Snowflake?

Why do we specify the stage, file format, and ON_ERROR = 'CONTINUE'?

Why do we run a SELECT * FROM csv_table after the data load?

How does this help in validating the load process?
