

Snowflake CLI – Homework / Play Tasks

1. Basic CLI Usage

Check the Snowflake CLI version.

Test your connection to Snowflake using the CLI.

2. Running Simple SQL

Run a SQL command to show all databases.

Run a SQL command to show all warehouses.

Run a SQL file using the Snowflake CLI.

3. Creating Objects

Create a database using the CLI.

Create a schema inside that database.

Create a table using a SQL file and run it through the CLI.

4. Working With Stages

Upload a small CSV file to an internal stage using the CLI.

List the files inside the stage.

Download the uploaded file back to your computer.

5. Loading and Unloading Data

Load CSV data into a table using COPY INTO via the CLI.

Unload data from a table into a stage.

6. Deploying a Snowflake Project

Initialize a Snowflake project using snow init.

Deploy the project using snow deploy.

7. Query Output Practice

Run a SELECT query and save the results to a CSV file using the CLI.

Try different output formats such as pretty, CSV, and JSON.

8. Playing With Context

Change the warehouse while running a query.

Change the database and schema using CLI options.

9. Troubleshooting and Help

Use the help command to list all available CLI commands.

Run a command in verbose mode to view detailed logs.
