

## Snowflake

⇒ Snowflake is the cloud-based platform to store and manage the data. Snowflake is a kind of SaaS (Software as a Service).

⇒ If I want to integrate with any other tool, communicate directly from the snowflake. It is the best platform to load the data efficiently.

### Why we choose Snowflake:

- 1) Speed
- 2) Scalability
- 3) Cost

⇒ It is cloud-based data platform.

We can easily access it from anywhere through the internet.

⇒ And, it can easily scale up and down based on the size of data.

### Storage / Compute

## Storage:

⇒ Storage is nothing but, it is used for store the data.

## Computing:

⇒ Computing is a processing area, it can work in the RAM area.

## Structured data:

⇒ Structured data is a kind of thing table, rows and columns. [Excel, SQL]

## Unstructured data:

⇒ It has no format & Organization.

## Semi-Structured data:

⇒ Semi-Structured data is JSON (or) XML file.

Ex: CSV files.
